# Help medical researchers connect DNA variation to genetic diseases

University of Vermont Health Network (UVMHN) has partnered with LunaDNA to help research and drive medical breakthroughs.

Participating in the UVMHN Genomic DNA Test enables you to contribute your health and DNA information to LunaDNA and learn about your potential health risks.

## Why it matters

Your unique health and DNA information can help researchers study how DNA variation is related to disease. When your information is combined with that of others, more opportunities are created for medical researchers to discover treatments and cures for diseases.

The future of health care discovery can be shaped by what you share today.

**YOU HAVE THE POWER TO MAKE A DIFFERENCE AND CONTRIBUTE TO HEALTH CARE DISCOVERY**

To learn more, or to register, go to [learn.lunadna.com/UVMHN](https://learn.lunadna.com/UVMHN)

## How it works

### CONTRIBUTE YOUR INFORMATION

You can easily copy your DNA information and your health history into LunaDNA's secure database.

### ACCELERATE DISCOVERY

LunaDNA lets researchers know that your information exists. If researchers want to use your data, LunaDNA will ask your permission first.

### PRIVATE + SECURE

LunaDNA makes data sharing anonymous. You control what information is shared for research, and you can stop sharing at any time. You still own your information, while giving researchers permission to study it.

### EARN SHARES

You earn ownership shares in LunaDNA for your data contribution and benefit in the value created from medical breakthroughs.

Your home for health discovery
